

Fixed ZrO₂ physics

A

- stress-resolved barrier
- GB/surface diffusion fixed
- defined open/closed laws
- default mobility provisional

Processing variables

B

- ρ_0 , G_0 , pore D50/width
- T_1 , heating rate
- p_{switch} and resulting G_1
- T_2 and hold time

Prior reference

C

- 693168: response form only
- not ZrO₂ parameterization
- no state values copied
- not calibration

Prediction workflow

D

- 5,020-state screen
- 24 promoted switch states
- exact cloned-state T_2 grid
- classification → figures → QC
