

(a)

$$\rho$$

solid fraction

(b)

$$G$$

mean grain size

(c)

$$f_{\text{fine}}^c$$

removable connected pores

(d)

$$\bar{r}_p^c$$

connected mean pore radius

(e)

$$W_{\text{PR}}$$

non-densifying work

(f)

$$X_j$$

persistent junction state

(g)

$$\Lambda_{\text{TJ}}/K_{\text{TJ}}$$

multihit activity ratio

(h)

$$C_{\text{TJ}}^{\text{pore, constraint}}$$

distinct TJ populations
